DETAILED ACTION

Response to Amendment

In response to the amendment filed April 21, 2003 in which the applicant has amended claims 1, 6, 7, 11, 19, and 20, adds new claims 22 and 23, and claims 1-23 are pending in this office action.

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-10, and 19-23 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The method and apparatus of striking or squeezing a contact element to relieve stress does not provide a concrete and tangible result. The mere striking or squeezing a contact element like a punching bag does not render the same result for each and every user. The method claimed as a whole does not produce a useful concrete and tangible result.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 11-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Oh '998.

Art Unit: 3714

5. Oh discloses a device connectable with the desktop computer monitor, in which the examiner interprets to be the plush stuffed anatomical members for mounting on a computer monitor, and a contact element connected to the support, in which the examiner interprets to be the fasteners (25) connected to the stitches (33) of the other element as recited in claim 11; the support is substantially rigid as recited in claim 12; the support configured to releaseably engage an engagement element on the computer component as recited in claim 13; the contact element is moveable mounted to the support as recited in claim 14.

Allowable Subject Matter

6. Claims 15-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

7. Applicant's arguments with respect to claims 1-23 have been considered but are moot in view of the new ground(s) of rejection.

It is noted that applicant has made a request for the examiner to initiate a personal interview, should the examiner be persuaded that such would speed resolution of the issues in this case. While it is noted that examiner initiated interviews, as proscribed in practice by the MPEP, are generally limited to such issues as request for restriction, or minor claim changes at allowance and that it is not considered general practice for an examiner to initiate and interview

Art Unit: 3714

otherwise, applicant's requests are noted. If applicant would like to interview the pending application, he/she is welcomed to contact the examiner and such will be readily accommodated.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yuen '606, Sugar '634, and Shafik '099 all disclose different types of novelty device mounted or connected to a computer monitor.
